Greater Comfort for Every Prescription

HD **AUGEN**
LENSES

Our world today is made of high definition – whether in your television set, or your eyeglasses.

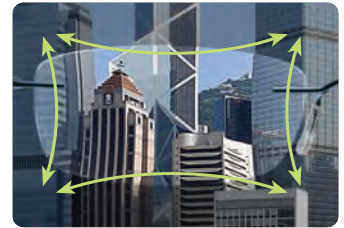

Augen High Definition Lenses® use advanced optical technology to provide wide, clear, natural vision for single vision prescriptions – even in higher Rx's.

- Impressive clarity in all viewing directions
- Thinner, so your glasses look more attractive
- Lightweight, so your eyewear is more comfortable all day
- Available in clear and light-sensitive materials

Sharper Images with No Peripheral Distortion

Conventional Lens

- Produces image distortion through the lens periphery
- Can result in visual fatigue and eye irritation

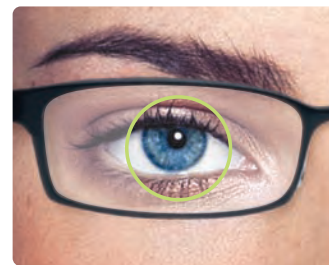

High Definition Lens

- Sharp, clear vision from edge-to-edge
- No distortion in the lens periphery

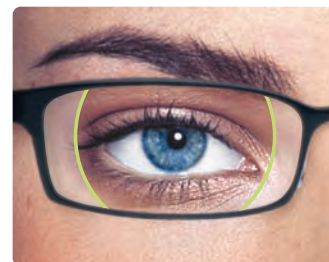

Wider Field of Natural Vision

Conventional Lens

- Provides clear vision in central area of lens only

High Definition Lens

- Gradually flattens towards the edges of the lens
- Eliminates distortion, providing a wide field of natural vision
